Mulilo Renewable Project Developments Engineering Vacancy

Overview:

Mulilo Renewable Project Developments (Mulilo) is looking for a graduate engineer to join our renewable energy development team based in Mowbray, Cape Town.

Company Description:

Mulilo is a South African-based renewable energy project developer and investor with a focus on wind and solar PV technologies. Formed in 2008 when the local renewable energy industry was emerging, Mulilo saw the opportunities arising from our excellent local natural resources and the impending legislative frameworks in which have created a rapidly growing industry.

Mulilo has participated successfully in the South African REIPPPP program and has been awarded projects totaling 420 MW. In addition, Mulilo has a promising pipeline of projects which will ensure it is well positioned to continue its steady growth. The pipeline includes 2 GW of solar projects and 1.5 GW of wind projects.

Role/Responsibilities:

You will be responsible for supporting a number of different technical disciplines and teams, i.e., engineering and project development, in delivering projects to meet business needs.

Duties may typically include:

- Project work through data analysis
- Wind and solar energy modelling and programming
- Liaison and negotiation with internal and external suppliers, engineers and specialists
- Arranging meetings and briefings

Requirements:

- BEng / BSc (Eng.) qualification
- Strong communication and organizational skills
- Proficiency in MS Office
- AutoCAD and GIS software experience not required, but beneficial
