Microsoft Power Platform Solutions Developer

We're looking for candidates with a genuine passion for technology and a strong drive to find innovative solutions. Our team already includes talented Engineers—some of whom studied at Stellenbosch University—who are now entering their third year with us and thriving in our environment.

While prior work experience is not a requirement if you're still completing your studies, your CV should reflect some form of engagement with the tech space. This could be through a university project, part-time work, freelance experience, or even self-taught initiatives that demonstrate your growing skill set.

At the end of this role description for experienced developers, you'll find links to our LinkedIn page and company website. We encourage you to read the full job description, which is written for candidates with more experience. However, it will give you valuable insight into the skills you'll develop and the growth opportunities available in our team.

We're also proud to be the first in South Africa to hold a Bubble.io license—a no-code development platform that's rapidly gaining popularity. Demand from our clients in this space is growing, and we're excited about the impactful projects coming our way.

Role Purpose:

We are looking for an ambitious, detail-oriented Developer with Bubble experience to join our growing team in Cape Town.

In this role, you will be trusted to deliver high-quality Bubble applications — from building new products and MVPs to maintaining and improving existing apps.

You will work from clear user stories in Jira, interpret requirements, execute end-to-end builds, test thoroughly, and document your work for future handovers.

As part of a small, fast-growing team, you'll wear many hats, tackle new challenges, and work directly with clients from time to time to present your work and explain technical aspects in plain language.

Key Responsibilities:

- Build, test, and maintain Bubble applications — new builds, MVPs, features, and improvements.
- Work end-to-end: workflows, database design, responsive layouts, plugins, and light custom code when needed.
- Interpret Jira stories accurately, deliver solutions on time, and test work against acceptance criteria.
- Integrate with third-party APIs at a basic level (GET/POST); complex flows will have senior support.
- Build without high fidelity screen designs, and apply solid UX principles where needed - Also, build using provided Figma designs .
- Document your work thoroughly for easy handovers and team clarity.
- Proactively suggest workflow and database improvements — you'll help be involved to build on best practices and naming conventions as we grow.
- Present your work to clients and stakeholders as needed, and clearly explain technical limitations or solutions in simple terms.
- Collaborate with your team and PM for QA and feedback.

Skills & Experience Required:

- 1–2 years of Bubble development experience, ideally building real-world products or features in a team environment.
- Portfolio or proven work demonstrating your Bubble skills (Bubble certification a bonus).
- Comfortable with full-stack low-code: workflows, DB structure, responsive design, performance optimisation.
- Basic experience integrating third-party APIs (REST, OAuth not essential at this stage).
- Exposure to third-party no-code tools like Xano, n8n, Figma— A willingness to learn is critical
- Able to troubleshoot, debug, and test your own work thoroughly.
- Good communication skills for occasional client presentations and discussions.

Strengths & Traits — Who You Are:

- Meticulous: you care about naming, structure, and performance.
- Proactive: you spot improvements and raise them.
- Problem-solver: you love tackling challenges and figuring out how to deliver better solutions.
- Self-driven: you can take a Jira story and deliver it end-to-end with minimal oversight.
- Team player: you enjoy collaborating and contributing to a positive, supportive work environment.

intelligent innovation

- Excited about low-code/no-code and modern tools.
- Proud of your craft — you build products that work well and are easy to maintain.

Practical Details:

Salary: Based on Skills & Experience

Location: Cape Town-Rondebosch

Equipment: Provided

Working Hours: 8:30am - 4:30pm

Start Date: Immediate

Growth Path: Opportunity to grow your role as the team expands.

Potential to take on more ownership depending on your performance

Who Should Apply:

What matters is that you're excited to build, deliver value, and grow with a startup team that's doing great work.

The candidate should be able to design, develop and test the products required for the company's needs. Moreover, the candidate should be able to work with other developers in determining product strategy.

Responsibilities

- Develop and designing relevant code on project needs
- Mentoring junior developers
- Create test driven environment for relevant projects

Qualifications

- Bachelor's degree or equivalent experience in Computer Science 4-6 years of industry experience
- Technical depth across multiple languages
- Able to meet deadlines
- Leadership experience
- Strong communications skills
